

ROLLER SHADES

Inside Mount Track

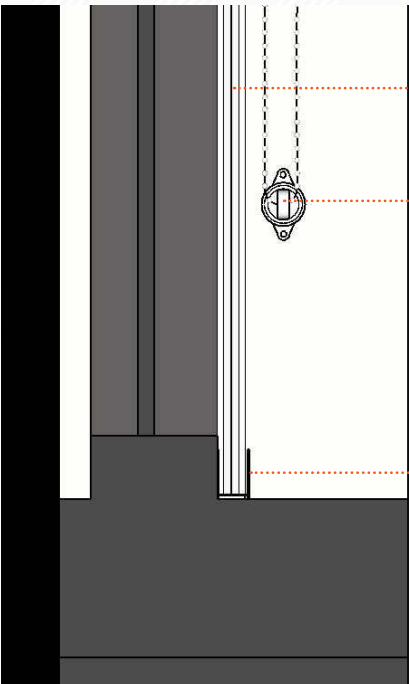

An Inside Mount roller shade is installed within a window frame. The brackets of a shade that are inside mounted are installed into the corners of the window frame and nearly the entire mechanism is contained within those bounds.

It offers a clean and minimalist look, and allows more light control as the material will cover more of the window with fewer gaps for light seepage.

WINDOW SECTIONAL VIEW

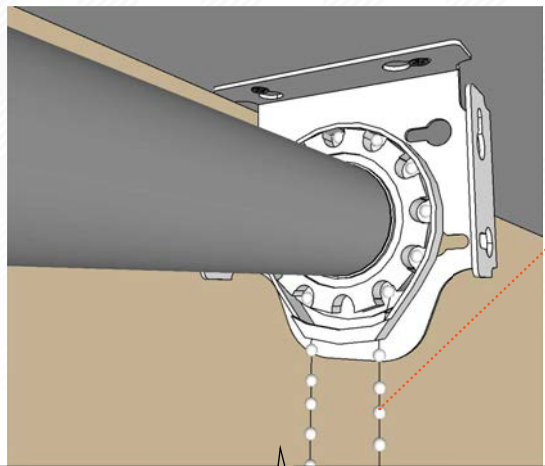

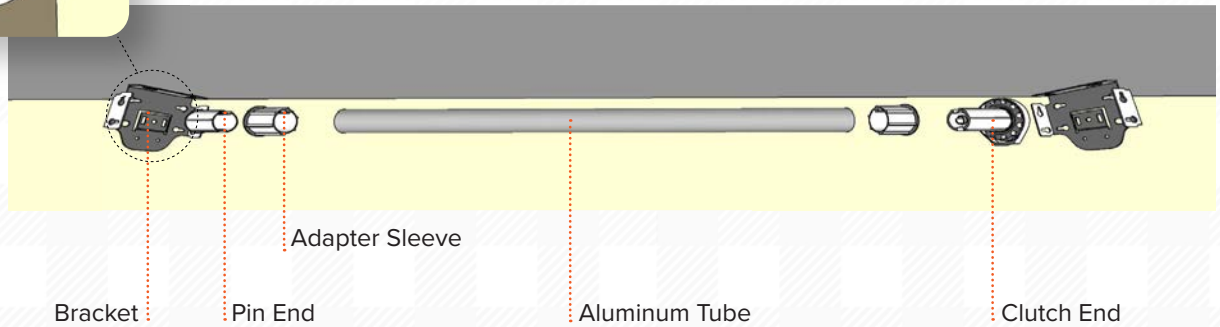

Brackets

Brackets are installed on the jamb, on both ends. Screws are not provided.

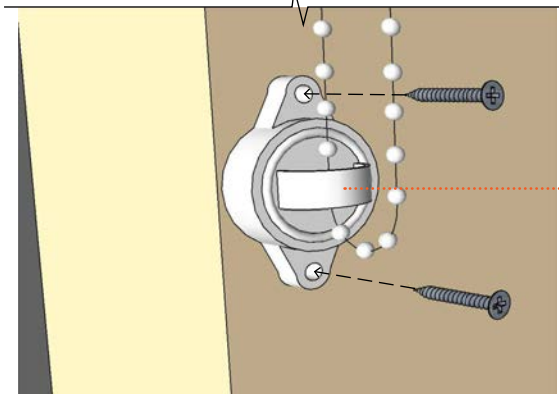

Clutch, Tube & Pin End

The clutch, tube & pin end are shipped pre-assembled with the fabric and is ready for installation.

Chain & Hold Down Device

Beaded chain wraps around the clutch. Ball stops are installed on site to set the upper and lower limits.

Safety hold down device is mounted on the inside face of the window jamb with provided mounting screws.

Fascia

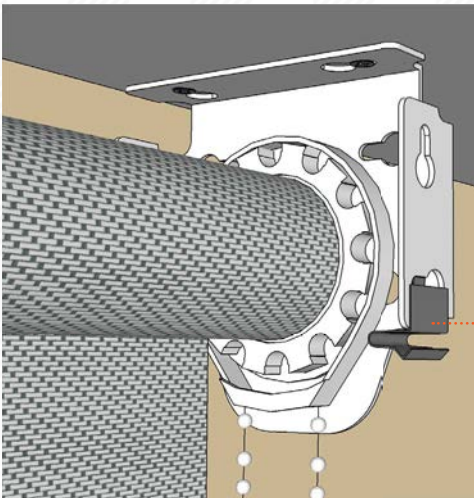

The fascia conceals the mechanism and comes in 4" or 5" options.

4" Single Shade Color Options

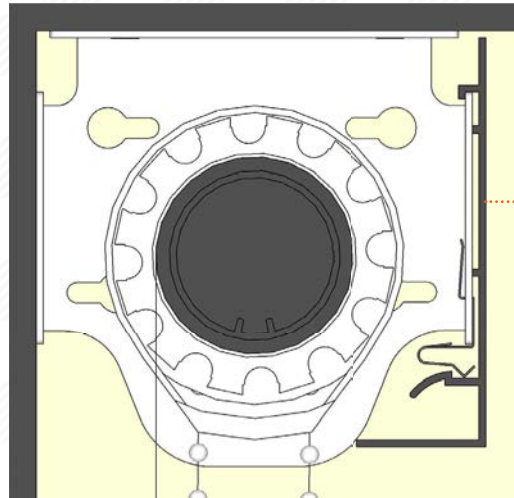

- White
- Clear Anodized
- Bronze
- Black
- Vanilla

5" Single Shade Color Options

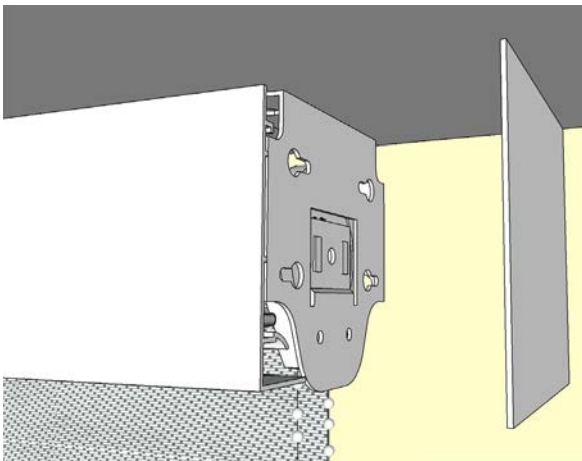

- White
- Clear Anodized
- Bronze
- Black

Metal fascia clips connect the brackets to the cover

End Plates

Available depending on the depth of your window, the end plates provide a cleaner finish on the sides should the shade protrude outside the jamb.
